- Worked with front-end technologies like HTML, JS, CSS and frameworks like JQuery, Bootstrap, Angular JS.
- Server Administration using Linux (Ubuntu) / Windows.
- Database Administration using MySQL.
- Worked with backend technologies like PHP (CI, Laravel) and PYTHON (Flask).

PROJECTS

BookVerse

- BookVerse is an Audiobook Application designed for mobile devices where a user can listen to a plethora of their favourite books with a click of a button.
- Rather than paying for every single book like some of our competitors BookVerse gives you access to all of their contents with a monthly subscription
- The main feature of BookVerse that distinguishes it from the competitors is the BookVerse Club which is a group of different channels created by the users themselves.
- The BookVerse club allows the users to chat and engage with other users on their favourite books and authors.
